

2.3.1 At5g15470, AtGAUT14: Family 8 glycosyl transferase (Group D)

Col is relatively enriched in ester (1755 and 1223 cm^{-1} ; possible acetyl ester) and neutral polysaccharides associated with pectin (arabinans, galactans, arabinogalactans) (1142, 1092, 1061, and 1030 cm^{-1}). The mutant is relatively enriched in carboxylates (1597 and 1427 cm^{-1}) and absorbances at 991 to 987 cm^{-1} .
