

2.3.2 At1g34270, AtGT47: Family 47 glycosyl transferase

Col is relatively enriched in esters (1720 - 1745 cm^{-1}) and in carboxylates (1597 and 1431 cm^{-1}) and an absorbance at 991 cm^{-1} (unassigned). The mutant is relatively enriched in absorbances that may derive from xyloglucan or from glucan (1099, 1076, 1041, 1025 cm^{-1}).
