

### 2.3.2 At2g32750, AtGT47: Family 47 glycosyl transferase (gt12) [SALK\_025435]

Col is enriched in methyl ester (1747 and 1234  $\text{cm}^{-1}$ ). The mutant is enriched in an absorbance at 1593  $\text{cm}^{-1}$  and in cellulose (1161, 1119, 1053, and 1034  $\text{cm}^{-1}$ ). The absorbances at 995, 945, and 899  $\text{cm}^{-1}$  may arise from rhamnogalacturonan I or possibly xyloglucan.
