

2.3.2 At5g11610, AtGT47: Family 47 glycosyl transferase (Group D)

Col is slightly enriched in a phenolic ester (1728 cm^{-1}) and absorbances at 1076, 1053, 1030 and 999 cm^{-1} (unassigned). The mutant is relatively enriched in carboxylates (1608 and 1412 cm^{-1}). Some enrichment of a neutral polysaccharide, either pectic side-chain or cross-linking glycan, in the mutant is indicated in PC loading 3 ($1168, 1099, 1106, 1072$ and 1041 cm^{-1}).
